PAPIRUS workshop

EU funded PPI projects – sharing best practices

Aim of the workshop

This technical workshop will gather representatives of EU funded PPI projects in order to exchange knowledge, experience and share best practices on PPI implementation.

During the event each PPI project will be presented. Each presentation will include short summary of the project, main achievements, success stories or barriers that have been encountered when implementing PPI.

Last session is dedicated for an interactive workshop where all public procurers will be involved in a discussion about challenges that may be encountered when implementing PPI.

We hope that together we will be able to develop some best practices and solutions that may minimize the challenges PPI brings. The outcomes of this workshop will be widely disseminated among public procurers across Europe in order to facilitate implementing PPI.

Participation in the event will be a great opportunity to present your project to other Public Procurers, to contribute to raising knowledge in the area of PPI as well as to do some networking and maybe even finding Partners for the next PPI projects.

The only source of knowledge is experience

- Albert Einstein
